Height: 12 feet

Spread: 8 feet

Sunlight: ○ ◐

Hardiness Zone: 4a

Description:

Dark green sprays of foliage grow in dense clumps on a dwarf, bushy, globose habit of growth; a perfect choice as a residential landscape accent, along the back of borders; or for screening

Ornamental Features

Coralliformis Dwarf Hinoki Falsecypress is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental globe-shaped form. It has attractive bluish-green foliage with silvery blue undersides which emerges light green in spring. The scale-like sprays of foliage are highly ornamental and remain bluish-green throughout the winter.

Landscape Attributes

Coralliformis Dwarf Hinoki Falsecypress is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Coralliformis Dwarf Hinoki Falsecypress is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Coralliformis Dwarf Hinoki Falsecypress will grow to be about 12 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
